

# Moisture Analyzers

New Methods of Moisture Content Analysis

## Moisture Analyzers of 3Y Series

The best possible functionality and professionalism for a drying process and moisture content analysis!

- 5.7" touch screen display
- Interactive menu
- Wi-Fi
- Control and adjustment system for a drying chamber (GMP)
- Compliance with regulations (GLP System)
- Databases (products, weighings, customers, drying programs, drying processes reports, control and statistics for drying processes reports)
- Dynamic control of sample weight (bar graph)
- Drying parameters optimisation (Test)
- Drying process visualisation (%M, %R, %D, graph)
- Statistics (trend of sample humidity over time)
- Printouts, reports (standard PCL)
- Multilingual menu
- Interfaces: Ethernet (network applications), USB, RS 232
- Wide spectrum of applications (industry, laboratories, universities, research and development institutes)

### Home Screen

- A** Information on a selected working mode and on a current drying mode
- B** Information on a logged in user
- C** Area for date, time, information on connection, battery level, etc.
- D** Pictogram informing on levelling status
- E** Moisture analyzer indication area
- F** Weight bar graph
- G** Bar graph for sample weight control
- H** Configurable area for supplementary information
- I** Drying mode / temperature selection
- J** Auto switch-off option
- K** Printout interval
- L** Temperature and elapsed analysis time
- M** Area defining the drying chamber (Opened / Closed / Drying Process)
- N** Quick launch bar providing access to functions
- O** Proximity sensors (optimization of operation)

# NWA

# 3Y

Maximum efficiency and productivity. Arranging work through databases. History of moisture content variations for a given sample. Easy data exchange between devices. Data protection and access control. Fully configurable screen menu.

## Moisture Analyzers of X2 Series

Professional design assuring the highest quality of drying process and maximum comfort of operation.

- 5.7" colour touch screen
- Free customization of menu elements
- Wi-Fi
- Control and adjustment system for a drying chamber (GMP)
- Compliance with regulations (GLP System)
- Databases (products, customers, users, packaging, drying programs, drying reports)
- Dynamic control of sample weight (bar graph)
- Drying parameters optimisation (test)
- Drying process visualisation
- Statistics (trend of sample humidity over time)
- Printouts, reports (standard PCL)
- Multilingual menu
- Wide spectrum of applications (industry, laboratories, universities, research and development institutes)

## Home Screen

- A** Displaying home screen
- B** Exit (return to the previous screen)
- C** Tare button
- D** Display shutdown
- E** Enter/Print button
- F** Zero button
- G** Status bar (working mode, moisture analyzer metrological data)
- H** Area with drying/weighing result
- I** Information panel
- J** Quick access key triggering functions and settings
- K** Current working mode settings
- L** Proximity sensors
- M** Drying mode / temperature selection
- N** Drying process automatic shutdown
- O** Printout interval
- P** Temperature and analysis time
- R** Area defining the drying chamber (Opened / Closed / Drying Process)

MMA

MA 60.X2

Clear information arrangement. Uncomplicated and intuitive operation as a result of free customization of the menu. Automatically opened and closed drying chamber.

## Moisture Analyzers of R Series

Advanced technology for a drying process and moisture content analysis!

- LCD display
- Cascading menu
- Wi-Fi
- Control and adjustment system for a drying chamber (GMP)
- Compliance with regulations (GLP System)
- Databases (users, products, programs, tares)
- Drying parameters optimisation (Test)
- Drying process visualisation (%M, %R, %D, graph)
- Printouts, reports (standard PCL)
- Multilingual menu
- Wide spectrum of applications (industry, laboratories, universities, research and development institutes)

### Home Screen

- A** Elapsed drying time
- B** Drying temperature
- C** Area defining the drying chamber (Opened / Closed / Drying Process)
- D** Moisture content result for a given sample
- E** Automatic shutdown
- F** Drying mode
- G** Measuring unit %M, %D, %R
- H** Information area
- I** Direct access to reports on performed drying processes
- J** Direct access to databases
- K** Switching drying mode and changing drying temperature
- L** Selecting sample out of the database

MMA

AR

  
Compact size and design. Easy and intuitive operation. Direct access to reports and product databases. Ease of data exchange between devices. Versatility of applications in various workstations.

# Design and Construction

## Measurements Precision in all Thermal Conditions

Moisture analyzer comprises precision balance and a drying chamber joined together. High resolution weighing module is designed to provide quick and precise measurement of a particular sample weight, independently from its thermal condition. Module stabilisation is obtained using special algorithm controlling halogen lamp operation.

- A** drying chamber
- B** weighing module

Date	2019.01.12
Time	14:06:27
Balance type	MA 3Y
Balance ID	365661
Operator	Admin
Level status	Yes
Nominal mass	50 g
Current mass	50.0001 g
Difference	0.0001 g
Temperature	22 °C

Signature

For precise determination of sample weight it is necessary to perform adjustment procedure using external mass standard characterised by a respective accuracy class.

Accuracy is confirmed by a report presenting value of deviation.

## Drying Temperature Stability

Drying temperature stabilization is ensured by a heating element (IR emitter) coupled with a temperature sensor. Proper operation of this system is possible owing to adjustment performed in the course of a manufacturing process.

The emitter, as a heat source, is effective when carrying out analysis of various materials: powders, liquids, paste, semi-liquid substances, solid bodies etc.

Graduating drying temperature means comparing and correcting indications of moisture analyzer thermometer. The correction is referred to indications of control thermometer, three measuring points are used for comparison. During the test, the control thermometer replaces a weighing pan.

Correctness of thermometer indications (GLP) is checked periodically in the course of operation.

A specific algorithm controlling heating elements operation is needed in order to maintain a particular temperature throughout the drying process. **RADWAG has designed such an algorithm thus ensuring quickness and accuracy of operation independently from analysis duration.**

# Drying Temperature

## Heat Source Types and Intended Use

### IRS Halogen

Infrared short  
 $\lambda = \sim 1,2 \mu\text{m}$   
 mainly convection,  
 surface heating.

**Intended for:**  
 powder, semi-liquids,  
 liquids.

### IRM Emitter

Infrared medium  
 $\lambda = \sim 3,0 \mu\text{m}$   
 convection and radiation,  
 deeper layers heating.

**Intended for:**  
 most samples of liquid  
 or semi-liquid consistence,  
 powders, crushed solids.

### IRL Emitter

Infrared long  
 $\lambda = \sim 5,0 \mu\text{m}$   
 mostly radiation, sample  
 volume heating.

**Intended for:**  
 bodies of thick consistence  
 and for solids.

## Methods for Obtaining the Preset Temperature

### Standard Mode

**Intended use:**  
 Solid, powder and semi-  
 liquid samples. Temperature  
 grows until the determined  
 value is reached.  
**99% of applications.**

### Mild Mode

**Intended use:**  
 Mild mode shall be applied  
 when too fast temperature  
 growth eliminates  
 components other than  
 water.  
**Possibility of adjusting  
 the speed of temperature  
 growth.**

### Quick Mode

**Intended use:**  
 Samples of high humidity.  
 In case of overadjustment  
 the temperature drops until  
 the determined value is  
 reached.  
**Temperature drop caused  
 by heat coming from  
 evaporation is eliminated.**

### Step Mode

**Intended use:**  
 Drying minerals. Chemically  
 bound water and surface  
 bound water is eliminated.  
**Sample analysis for various  
 temperature values is  
 possible.**

IR emitter is one of the moisture analyzer heat sources, it operates in a feedback loop. This ensures thermal conditions stability for the time of analysis. **RADWAG-designed method for dynamic control of drying chamber temperature is one of the factors allowing to obtain short time for analysis process and repeatability within drying series.**

# Drying Methods

## Samples Types and Preparation

Size of the sample and its preparation shall provide the following: sample structure homogeneity, short time of drying, good repeatability of measurement within a measurement series and drying process result comparable to a reference result (standardised method).

**Solid bodies**  
- light sample,  
- requires grinding

**Samples of low humidity**  
- heavy sample  
(10 - 15 g)

**Liquids**  
- increasing active surface of evaporation is recommended

## Methods of Analysis Completion

TEST function analyses weight variation for a particular sample, occurring during the drying process. There are 5 different options for automatic shutdown. The user shall select option allowing him to end the drying process in a way ensuring that the obtained humidity value is as close as possible to a reference value. Among other automatic shutdown possibilities there are time-defined, manual and user-defined options, the latest one being the best adjusted to a particular sample characteristics.

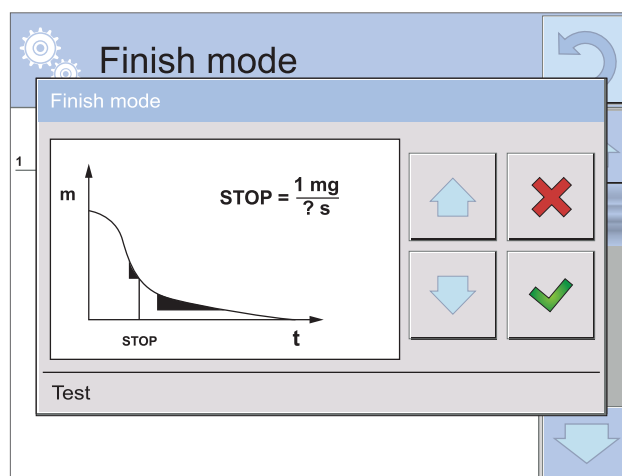

Relations of weight decrease within a specified time interval.

Initial mass	2.7548 g
0:00:10	0.1503% M
0:00:20	0.6258% M
----- Auto switch off -----	
0:08:08	Auto 1
Result	11.4789% M
----- Auto switch off -----	
0:11:05	Auto 2
Result	11.9058% M
----- Auto switch off -----	
0:13:55	Auto 3
Result	12.0502% M
----- Auto switch off -----	
0:15:20	Auto 4
Result	12.0858% M
----- Auto switch off -----	
0:18:10	Auto 5
Result	12.1526% M

Demonstrative printout of TEST function.

Obtained humidity value depends on start mass of a particular sample – an optimal mass value shall be selected prior running the tests.

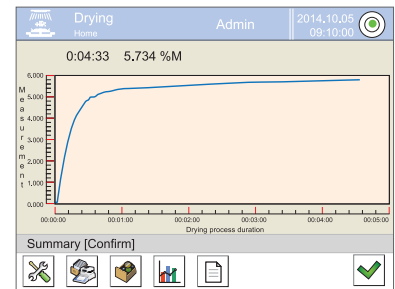

# Drying Process Optimization

## Automatic Control of Sample Weight

Obtaining optimal results for a drying process depends on samples quantity and weight. Too heavy sample lengthens duration of the drying process. Too light sample works against repeatability of the results. This proves that control of the sample weight is inevitable.

**A WEIGHT CONTROL** (checkweighing thresholds)

**B GRAPH** (drying process curve, registered for dynamic state)

Edit record	
1	Name Canded Chokeberry
2	Code 12345
3	Drying mode Standard
4	Auto switch-off Auto 3

34	Coal dust
35	Com
36	Com starch
37	Comsilage
38	Cotton

**D SAMPLES** (name, code, end mass, tolerance, etc.)

Sample description	
Equipment related to a sample:	Aluminum disposable pan
Sample preparation:	Spread a sample evenly on the whole surface of the drying pan.
Recommended sample size:	~10 g

**E SAMPLE DESCRIPTION** (information on how to prepare a sample for a drying process)

## Sample Structure Transformation

Unfavorable physical processes, affecting the sample structure, may occur during the drying process. These are caused by dispersion of indications and mistakes made when undertaking assessment of actual moisture content for a particular sample.

Respective method for a particular sample drying, shall be selected based on tests optimizing the sample size, drying temperature and method of analysis end procedure.

### Crust Formation

It is a process where an impermeable layer is formed on a sample surface. This makes removal of humidity from the sample impossible. As a result the indication being an outcome of an analysis is lower than the sample reference value.

### Sample Burning

Such a process is a consequence of too high drying temperature. It results in a change of sample colour. When sample burning occurs then the sample humidity value is greater than its reference value.

### Heat Absorption

Dark in colour samples absorb more heat than the light ones. this accounts for application of lower drying temperatures while drying light in colour samples. Tests need to be carried out in order to select the right temperature value.

# GLP and the Drying Process

## Drying Temperature Control

Drying temperature is a decisive factor for moisture content of a particular sample. The temperature is controlled periodically according to an adopted timetable, wherein the said timetable is specified for a particular temperature value.

----- Temperature test -----	
Start time	2019.01.30 13:57:05
Balance type	MA 3Y
Balance ID	1352
Adjustment kit no.	489/13
Preset temperature	120 °C
Target temperature	119 °C
Measured temperature	121 °C
Permissible error	+/- 3 °C
Status	OK

The temperature test is performed by means of a special control thermometer.

### Drying Mode

Temperature test is performed for standard drying mode, the most frequently used mode for moisture content analysis.

### Temperature

The test is performed for a preset temperature.

### Tolerance

Maximum permissible error for a drying process.

### Calibration Kit Number

Serial number of a control thermometer.

Time interval for test of both stability and drying temperature accuracy is merely 8-minute long!

# Reports and Statistics

## Report on Drying Process

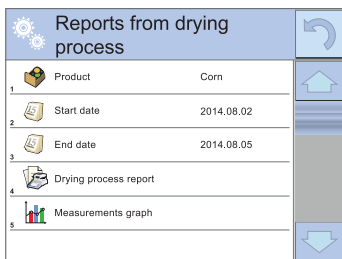

RADWAG moisture analyzers allow the user to make self-configured reports. Analysis, summaries, etc. may be printed by means of any office printer (PCL).

The report comprises three sections: the header (A), the data area (B) and the footer (C). Each section can be freely configured by a user.

## Drying Process Statistics

Moisture content analyses performed for the same sample are used to determine the sample moisture content variation within a specified time interval (Trend). Trend graph is calculated automatically. Calculating moisture content variation is required wherever manufacturing process and control is performed in a permanent manner. The obtained data is used by systems controlling the manufacturing process. It helps to determine optimal moisture content for a particular sample, required for a finished product prior its packing.

In order to determine trend graph, open a database and specify reference value for sample humidity and permissible tolerance for humidity determination.

Statistics – trend for moisture content variation over time, calculated automatically for each product.

# Databases

## Managing and Editing

### Databases Drying Process Ergonomics

Drying parameters such as temperature and automatic shutdown are optimally selected for every single sample. Trying to remember the parameters for just a few samples requires considerable effort. It is more convenient to record the parameters in a database than attempting to learn them by heart.

#### Product Database Contains any Data Relating to a Sample:

- name and description,
- EAN code: searching a sample in a database by means of a scanner,
- target value (%): value used for automatic control of sample weight (bar graph) and for determining moisture content variation over time (trend),
- Min, Max: value used for automatic control of sample weight (bar graph),
- tolerance: value used for determining moisture content variation over time (trend),
- drying program.

#### Drying Programs Database Contains any Data Relating to a Drying Process:

- name, code,
- drying mode, drying temperature,
- automatic shutdown (auto / time-defined / user-defined),
- start mass control (none / optional / essential),
- equipment intended for a sample (methodology),
- instruction on sample preparation for a drying process (methodology),
- required sample size (methodology).

### Database Editor

Database Editor PC software is designed to support users dealing with a vast number of samples. Clear structure of the program ensures quickness when it comes to specifying drying parameters and other information relating to a sample. Data is transferred from the software to a moisture analyzer by means of Ethernet (3Y) or RS 232 (3Y, R).

Users	Code	Name	Desc

# E2R

## Results Analysis Performed Online

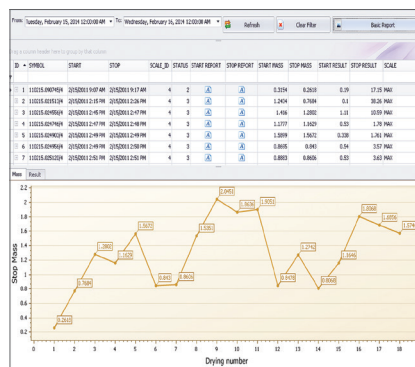

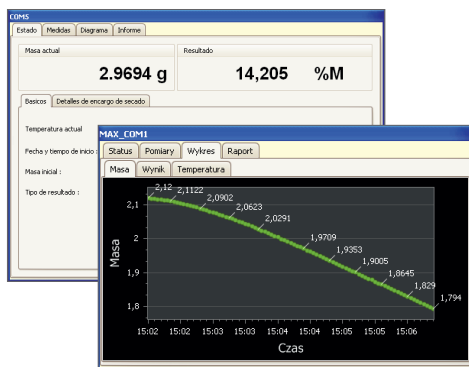

### Databases Drying Processes Ergonomics

Production processes for which moisture content of a particular sample is a crucial parameter, require quick reaction. This may be carried out using so called weighing networks comprising MA 3Y and MA R moisture analyzers. Each drying process is monitored on-line regardless of workstations location.

E2R Moisture Analyzer PC software is designed to record measurements performed by means of RADWAG moisture analyzers cooperating in a network, using RS 232 and Ethernet interfaces for connection. The software enables monitoring and reporting of collected measurements.

Software functions: on-line monitoring of moisture analyzer operation, possibility of configuring reports and graphs, analysis of data collected from many drying workstations, data protection.

E2R Moisture Analyzer is a module of integrated system for managing E2R weighing processes. E2R System comprises various programs ensuring continuous control of balances and their databases together with both, complete managing of the manufacturing process and the process optimisation.

# Intended Use and Applications

## Area of Use

Moisture content analysis and dry mass measurement of a particular product are both crucial for various branches of industry and science. Vast area of use and diversity of analyzed samples structure require individual approach to different substances.

### Dairy Industry

Samples: cheese, buttermilk, yoghurt, powdered milk, etc.

Samples are dried directly on a weighing pan or by means of glass fiber filters or silica sand (increasing surface of evaporation).

### Fruit and Vegetable Industry

Samples: dried vegetables, fruits and mushroom, nuts etc.

Samples shall be cut into smaller pieces (the analyzed samples cannot be too thick).

### Food Industry

Samples: sugar, flour, pasta, spices, gelatin, etc.

Thin layer of semi-liquid samples shall be distributed on a weighing pan (silica sand or glass fiber filters may be used). Other kinds of samples shall be crushed.

### Chemical Industry

Samples: emulsion, gel and lotions used for cleaning, paints, film, graphite, etc.

Thin layer of semi-liquid samples shall be distributed on a weighing pan (Silica sand or glass fiber filters may be used). Other kinds of samples shall be crushed.

### Agricultural Industry

Samples: grain, seeds, hay, biomass, etc.

Grain needs to be crushed prior drying.

## PC Software

RADWAG PC software supports moisture analyzers expanding their functionality.

### R-Lab

Scales preview, weighings graphs and statistics graphs.

### Database Editor

Readout, databases editing and record of computer stored databases on balance.

### Rad Key

Readout of balance data by means of defined Hot Key.

### E2R Moisture Analyzers

Record of weighments carried out by moisture analyzers cooperating in a network.

## Additional Equipment

- Anti-vibration weighing tables,
- Disposable weighing pans,
- Thermal and dot matrix printers,
- Barcode scanners (for 3Y series),
- Control thermometer,
- Water vapor permeability set.

Complete offer is to be found on [www.radwag.com](http://www.radwag.com) website.

# Moisture Analyzers Comparison

## MA 3Y

First-class professional moisture analyzers intended for the most challenging applications. They assure excellent accuracy and wide range of functions.

**Display**  
5.7" colour resistive touch screen.

**Databases**  
10 databases (users, products, customers, packaging, warehouses, universal variables, drying modes, weighing reports, ambient conditions).

**Level system**  
Electronic

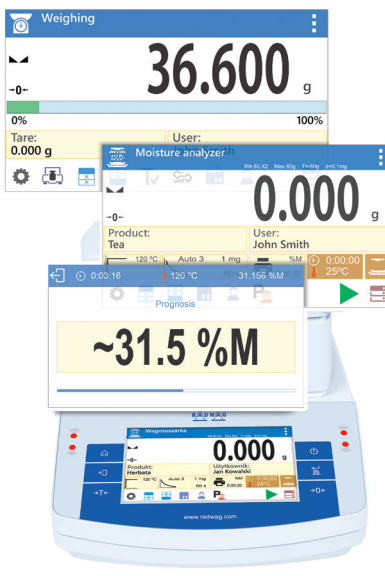

**Bar graph**  
Bar graph of maximum capacity,  
Bar graph for control of sample mass.

**Proximity sensors**  
2 independently programmable IR sensors.

**Graphs**  
Drying process visualisation.

## MA X2.A

Advanced moisture analyzers intended for most applications. They guarantee high quality measurements along with easy and convenient operation.

**Display**  
5" colour capacitive touch screen.

**Databases**  
8 databases (users, products, customers, packaging, drying programs, drying reports, weighing reports, ambient conditions).

**Level system**  
Bull's eye level.

**Bar graph**  
Bar graph of maximum capacity.

**Proximity sensors**  
2 independently programmable IR sensors.

**Automatic drying chamber**  
Automatically opened and closed drying chamber.

**Prognosis of the drying process result**  
Prognosis function (max. 6-fold reduction of the drying time).

## MA R

Versatile and reliable standard moisture analyzers. They are characterized by high measurements accuracy, uncomplicated operation and robust design.

**Display**  
Large, monochromatic LCD with backlight.

**Databases**  
6 databases (users, products, packaging, drying programs, drying reports, weighing reports).

**Level system**  
Bull's eye level.
